Continuation of No. 11, The request for reconsideration has been considered but does NOT place the application in condition for allowance because:

No amendment was made to the claims. The claims as submitted due not distinguish the invention from the prior art used for the rejection U.S., Patent No. 6,189,095 Coppersmith et al.

The applicant argues, that Coppersmith does not disclose "a first register storing data to be encrypted or decrypted, a second register for receiving data which has been encrypted or decrypted, and combinational logic performing computation iterations of the crypto-function on data stored in the first register and outputting data to second register" and that "one more of the sub processes may be embodied in a hardware chip". The Office disagrees this is shown in Coppersmith col. 5, line 33 through col. 6, line 8. Coppersmith explains that the amount of hardware or software used can be selected to speed the encryption process. Therefore the selection of having the encryption process being performed in hardware only can be performed. Furthermore Coppersmith explains various combinations of encryption processes.
